(This is a courtesy post to everyone who helped us on the Kickstarter. I would like to add that the letter on the top right corner of this post is an apology to everyone for taking so long to complete the project. We had to make up some time for previous obligations. I have missed you guys so much) This post is an update on our progress since the Kickstarter on the original Wic Reset V project, which was launched on November 5th. Changes to the Wic reset From the original project: I am happy to finally announce that there are few Wic reset v1.5.2 in the works. It includes the following features USB Power bank on the desktop Convenience of a HDMI/USB Cable for a better viewing experience Syncing of the Wic reset v1.5.2 to more devices by including a new device ID Some other minor improvements Added more photos Added new patch list Added a customizable desktop wallpaper Added a notifications and mobile alerts Added another BIOS back-up tool Added an option to use a custom name (by a user in the list) instead of the default name of the Wic reset. This is the list of the updated features in Wic Reset v1.5.3. If the device connected to the desktop does not have the power bank feature, then you can use this new USB port to charge your devices directly on your desktop. I have added a guide with a video tutorial on how to add a USB port on your desktop for charging devices. HDMI or USB to HDMI cable A lot of our backers have asked for a setup where the Wic reset can be used with their HDMI cables. With the Wic reset V 1.5.3 I have added an HDMI out port so the users can easily plug in their HDMI cable and directly use the HDMI output port to connect to the TV. You can also use the Wic reset with USB cables to connect to the device. With a USB cable you can take the advantage of the USB port on your PC to connect to the Wic reset, it works as a docking station and you can charge your device while it is connected. The USB cable comes in the 2.4A type and is not compatible with the 3.0A type USB port. 82157476af
